See Bulletin B-2-014 for additional information regarding Plans Submittals			

* An NSPI Identification Number is a number created by the Inspection Department within the wiring inspection database. This number has been established to identify individuals in our system other than those who currently have a wiring permit account. If you do not have an identification number assigned to you please provide your business details with your plan submittal and one will be assigned to your firm. Electricians submitting plans for review shall provide their electrical certificate number.

**The required date field is provided to help Inspection Services align plans review service levels with anticipated construction timelines. Plan submittals should be sent in a minimum of 10 business days prior to the required date and when possible during the pre-planning or design stage.
